Summary

Detail-oriented Computer Science and Engineering student with experience in web development, mobile development, and data analysis. Seeking to leverage technical skills and strengths in a challenging role.

Education

Parul University

B.Tech in Computer Science and Engineering

Vadodara, Gujarat, India

2021 - 2025

CGPA: 7.29

Experiences

WRTeam

PHP Developer Intern

May 2024 – June 2024

Remote

- Developed and maintained 1 web applications using PHP.
- Assisted in integrating front-end and back-end systems.
- Improved code quality and performance, resulting in a 50%+ reduction in files needed for dynamic fetching, leading to significant space and code line savings.

CodSoft

Python Programming Intern

May 2024 – June 2024

Remote

- Developed 5 Python applications showcasing user management, game logic, security features, arithmetic operations, and task management.
- Implemented 3 new features improving application robustness by 30%

CodSoft

Data Science Intern

May 2024 – June 2024

Remote

- Conducted data analysis on 5 datasets, generating a total of 55 visualizations using Pandas, Matplotlib and Seaborn.
- Built predictive models achieving 85%+ accuracy.

CodSoft

Flutter Developer Intern

June 2024 – July 2024

Remote

- Developed 4 cross-platform applications using Flutter.
- Implemented various features and functionalities, enhancing user engagement and app usability.
- Conducted code reviews and optimized app performance.

Shreesoftech

Laravel Developer

Dec 2024 – Present

Onsite

Projects

Portfolio | *HTML, CSS, JavaScript, Tailwind CSS*

[GitHub](#) | [Live demo](#)

- Created a personal portfolio showcasing various projects and skills.

Hindu Scriptures | *HTML, CSS, JavaScript, Express.js, Node.js, Google Gemini AI (for web), Java (for android, using WebView technology)*

[GitHub](#) | [Live demo](#)

- A platform for searching Hindu scriptures, featuring full-text searches, translations, although mainly focused on original language.
- Implemented AI Search using Google's Gemini 2.5 Flash Model API.
- Utilized URL rewriting functionality to enable seamless translation from Sanskrit or any Devanagari script to various languages using Google Translate.

Recipe App | *Flutter*

[GitHub](#)

- Created an application to browse recipes using the Flutter framework.
- Implemented features for searching, filtering, and viewing recipes with a user-friendly interface.

Crop Recommendations App | *Python's Flask, HTML, CSS, JavaScript, Google Gemini AI*

[GitHub](#) | [Live demo](#)

- Developed an app to recommend crops based on location using Flask and Google's Gemini 2.0 Flash Lite Model API.
- Considered weather, soil types, nutrients, sunlight, pests, water requirements, and more for recommendations.

Nutrient Recommendations App | *Python, Flask, HTML, CSS, JavaScript, Google Gemini AI*

[GitHub](#) | [Live demo](#)

- Created an app to provide personalized nutrient recommendations using Flask and Google's Gemini 2.0 Flash Lite Model API.
- Gathered user inputs (age, gender, height, weight, etc.) via axios-based form.
- Generated daily nutrient and caloric intake recommendations with additional health tips.

Laravel Gemini AI Translation Extractor | *PHP, Laravel, Google Gemini AI, spatie/fork*

[GitHub](#)

- Interactive Artisan command (translations:extract-and-generate) that scans Blade/PHP/JS/TS for translation keys (ignoring route()/config()), lets you select which PHP/JSON files to process, and supports graceful abort via "q."
- AI-powered translations using Google Gemini 2.0 Flash-Lite—batching keys (--chunk-size), running concurrent requests (--driver=fork), and auto-retrying on rate limits.
- Auto-generates Laravel-style language files (PHP & JSON), logs all key sources and failures (translation_extraction_log.json/failed_translation_keys.json), and offers rich CLI options for exclusions, retries, verbosity, and more.

Enhanced Precision Grayscale Converter (Web | Desktop) | *Python, FastAPI, HTML5, CSS3, Tailwind CSS, JavaScript, Axios*

[GitHub - Web](#)
[Live demo - Web](#)
[GitHub - App](#)

- FastAPI backend exposing single & batch conversion endpoints for Rec.709, L*a*b*, HSL, HSV, BT.601, BT.2100 and Gamma modes—outputs 8- or 16-bit PNG/JPEG/HEIC/TIFF/WEBP/BMP with optional alpha-channel and metadata preservation.
- Responsive HTML/CSS frontend styled with Tailwind CSS (plus custom CSS) and vanilla JavaScript—uses Axios for real-time before/after previews, drag-and-drop or clipboard imports, format-quality controls (4:4:4, quality = 100) and EXIF/ICC strip-or-preserve toggles.
- Runs entirely on your server—no third-party uploads—supports configurable bit-depth, chroma-subsampling, and advanced export options via intuitive UI.

- High-precision calculation engine utilizing a Swiss Ephemeris C-FFI bridge and IEEE 754 double precision to compute Tithi, Nakṣatra, Yoga, Karaṇa, and 30 named Muhūrtas with up to 0.001 arcsecond accuracy.
- Sophisticated KalaNirnaya logic orchestrates 237 regional Hindu festivals (Smarta/Vaishnava) across Amanta/Purnimanta calendar types, supporting English, Hindi, and Gujarati localized outputs.
- Framework-agnostic architecture runs as a standalone CLI for batch JSON generation (eclipses, year-long calendars, Karmakala windows) or integrates seamlessly into Laravel via native Facades and Service Providers.

Swiss Ephemeris FFI | *PHP, Python FFI, Ctypes, Swiss Ephemeris, C lib*[GitHub \(php\)](#)
[GitHub \(python\)](#)

- Zero-abstraction 1:1 Foreign Function Interface mapping for the Swiss Ephemeris C API — 106 public functions and 348 constants exposed as two sibling packages: PHP via ext-ffi with raw CData pointers, and Python via ctypes with caller-owned buffers; both with complete signature and constant parity against the upstream C declarations.
- Ships prebuilt native shared libraries (.so, .dylib, .dll) for Linux x64/arm64, macOS x64/arm64, and Windows x64, bundled directly inside each package wheel — eliminating manual C compilation and CPython extension ABI coupling for end users across both ecosystems.
- PHP package published on Packagist and Python package published on PyPI with a pure-Python wheel independent of CPython version tags.

PostalKit | *Python, ctypes, FFI, libpostal*[GitHub](#)

- Strict 1:1 ctypes wrapper around the OpenVenues libpostal C library for ML-based international street address parsing, mapping 46 C functions, 10 structs, and 42 bitwise flags.
- Zero-setup installation automatically downloads ~2GB of machine learning models and OS/architecture-specific prebuilt shared binaries on the first run, completely bypassing complex autoconf/make toolchains.
- Enforces true C-paradigm memory management (explicit pointer allocation and destruction) within Python, ensuring memory-safe, cross-platform execution for high-volume geographical data logistics.

Literary & Linguistic Poetry Analyzer | *Python, FastAPI, PyTorch, HuggingFace*[GitHub](#)

- Pure asynchronous FastAPI backend orchestrating 1.5GB+ HuggingFace Transformer models, spaCy, NLTK, and Stanza for deep sentiment, emotion, and phonological classification of multilingual text and poetry.
- MVC-style architecture serving responsive Jinja2 HTML templates, featuring a dedicated setup_models.py deployment script that auto-downloads required ML assets and NLP datasets based on .env configuration.
- Highly scalable, production-ready environment featuring native ORM connection pooling for SQLite, PostgreSQL, and MySQL/MariaDB via SQLAlchemy and Alembic database migrations.

Technical Skills

Programming Languages: Python, Java, C, C++, JavaScript, PHP**Frontend Development:** HTML, CSS, Tailwind CSS, React, Vue.js, AngularJS, Next.js, Bootstrap, SCSS**Backend Development:** NodeJS, ExpressJS, Laravel, MongoDB, MySQL, SQLite, PostgreSQL

Technologies/Frameworks: Flask, Django, FastAPI, Flutter, Git, GitHub, GitLab, Vite
Tools & Platforms: Command Prompt, PowerShell, Terminal, VS Code, Android Studio, Linux
Multimedia: Video Editing, Photo Editing
Productivity: Presentation, Spreadsheet, Word Processing, Automation Tools
Additional Areas of Expertise: Data Science, Cybersecurity

Certificates

PHP Developer
Python Programming
Data Science
Flutter Developer
Data Analytics with Python
Laravel

Soft Skills

Analytical Skills, Research Skills, Problem Solving, Attention to Detail, Time Management, Adaptability, Communication, Teamwork, Leadership
